NEEDS FIX

0

SCREENSHOTS

5

Document control

HR selects a governed template, previews sample data, generates a PDF for a real employee, and then retrieves that same output through persistent generated-document history. Employees are blocked from HR-only generation.

Reporting workflow

HR runs all available report families, verifies normalized result payloads, saves a reusable headcount report, executes it, and confirms managers and employees receive the correct role boundaries.

Analytics workflow

The analytics panel answers a natural-language HR question using calculated workforce metrics. Manager access is allowed, employee access is denied, and dashboard statistics are verified for role-aware loading.
