How To Read This Document

Each scenario is written as a realistic HR workflow, not just a technical check.

Navigation steps show how a user reaches the feature in AuroraHR.

Expected and actual outcomes make the product behavior auditable.

Screenshots are embedded as proof for investor, customer, and internal QA review.

Important boundary: live baseline screenshots and branch remediation are separated. Branch fixes require a post-deploy strict visual re-run before they are claimed as production-proven.

Executive Narrative

This document follows the daily employee and HR operating rhythm: employees record attendance and apply for leave, managers approve exceptions, HR intervenes where required, and leadership reviews company-level health. The first QA pass proved the core workflows and surfaced reporting and operational control gaps. Subsequent hardening connected mass updates and sync to backend persistence, added reporting UI, and fixed the department reporting query.

Daily attendance self-service and monthly attendance history

HR PROCESS BEING TESTED

Employees need a simple daily check-in/check-out experience and a transparent monthly record of their attendance, late marks, work hours, and exceptions.

SAMPLE DATA AND PERSONA

Persona: Neha Shah, demo employee. Date range: May 2026. The run also exercised clock-in and clock-out guard behavior so repeat submissions do not corrupt attendance.

PRODUCT NAVIGATION

- 1. Log in as demo.employee@aurorahr.in.
- 2. Open Attendance from the left navigation.
- 3. Review the Today attendance card, monthly selector, status cards, and attendance table.
- 4. Use Export when a monthly attendance file is required.

EXPECTED OUTCOME

The employee should see only their own attendance, current day status, monthly records, and available self-service actions.

ACTUAL OUTCOME

The employee view rendered correctly and the backend clock endpoints behaved safely for repeated execution.

Check	Status	Evidence	Notes
ATT_DAILY_01	Passed	clock endpoints verified; repeated execution is idempotency/error-guarded by backend	
VIS_ATT_EMP_01	Passed	screenshots/01-employee-attendance-my-monthly.png

Attendance regularization request and approval

HR PROCESS BEING TESTED

When an employee forgets to punch in/out or works from an alternate location, they should request regularization. The manager or HR should approve or reject with an auditable outcome.

SAMPLE DATA AND PERSONA

Two regularization requests were created for the demo employee. One was approved by the manager and one was rejected by HR.

PRODUCT NAVIGATION

1. Employee opens Attendance.
2. Employee opens Request Regularization.
3. Employee enters date, requested check-in/check-out, and reason.
4. Manager opens Attendance > Requests.
5. Manager approves; HR can intervene and reject other pending requests.

EXPECTED OUTCOME

Pending regularizations should appear in the approver queue and approval should update the attendance record.

ACTUAL OUTCOME

Regularization creation, manager approval, and HR rejection all passed.

Employee leave balance review and leave application

HR PROCESS BEING TESTED

Employees need to understand leave balances before applying and then submit a leave request with dates, type, and reason.

SAMPLE DATA AND PERSONA

Persona: Neha Shah. The visual run shows casual, sick, and earned leave balances plus pending, approved, and rejected requests.

PRODUCT NAVIGATION

- 1. Log in as employee.
- 2. Open Leave Management.
- 3. Review balance cards and request history.
- 4. Click Apply Leave to open the application modal.

EXPECTED OUTCOME

The employee should see available leave balances and create a request without seeing team or HR-only data.

ACTUAL OUTCOME

Leave balances, request history, and apply leave modal rendered correctly.

Employee leave balance review and leave application

Manager approval and HR intervention

HR PROCESS BEING TESTED

Managers approve routine leave requests for their team. HR should be able to intervene for exceptions, policy control, or rejected cases.

SAMPLE DATA AND PERSONA

One employee casual leave was approved by the manager. One sick leave request was rejected by HR to verify intervention controls.

PRODUCT NAVIGATION

- 1. Manager opens Leave Management > Team Approvals.
- 2. Manager reviews pending request and approves.
- 3. HR opens Leave Management > Team Approvals/all requests.
- 4. HR rejects another pending request with comments.

EXPECTED OUTCOME

Approvers should see only actionable team/company requests based on role and record decisions with comments.

ACTUAL OUTCOME

Manager approval and HR rejection both passed and were visible in the role-specific UI.

Manager approval and HR intervention

Company attendance control, mass update, and sync

HR PROCESS BEING TESTED

HR needs a daily company view for exceptions, and operational tools to correct attendance in bulk or import device/file attendance data.

SAMPLE DATA AND PERSONA

The run verified HR company attendance and backend bulk update. Later hardening wired mass update and CSV sync to real persistence and removed mock device data.

PRODUCT NAVIGATION

- 1. Log in as HR.
- 2. Open Attendance > Company.
- 3. Review daily company attendance cards and table.
- 4. Open Mass Update for bulk corrections.
- 5. Open Sync for device/file import.

EXPECTED OUTCOME

HR should see company-wide controls and any correction/import should persist through backend APIs with audit fields.

ACTUAL OUTCOME

The visual controls rendered on the live baseline. Initial QA identified UI-only mass/sync behavior; this branch hardened both workflows. A post-deploy strict re-run is required to visually prove the persisted mass/sync behavior.

Check	Status	Evidence	Notes
ATT_BULK_01	Passed	bulk updated 2 records	
VIS_ATT_HR_01	Passed	screenshots/08-hr-attendance-company-daily.png	
VIS_ATT_HR_02	Passed	screenshots/09-hr-attendance-mass-update-modal.png	UI modal captured; backend bulk update was verified separately.
VIS_ATT_HR_03	Passed	screenshots/10-hr-attendance-sync-modal.png	Current UI uses mock preview/save behavior.

Attendance and leave reporting

HR PROCESS BEING TESTED

HR and leadership need date-range reporting to understand attendance health, leave usage, department-level patterns, and exceptions.

SAMPLE DATA AND PERSONA

The test queried attendance statistics, department attendance, and leave statistics for the demo tenant.

PRODUCT NAVIGATION

- 1. HR opens Attendance.
- 2. HR selects Reports after the production hardening update.
- 3. HR chooses date range and reviews summary cards, department breakdown, leave summary, and CSV export.

EXPECTED OUTCOME

Reporting APIs and UI should return accurate department and leave metrics without query failures.

ACTUAL OUTCOME

Initial production test exposed a bad department column. This branch fixes the query and adds the Reports tab. The existing leadership screenshots are live-baseline evidence, not post-fix proof of the new Reports tab.

Check	Status	Evidence	Notes
REPORT_DATA_01	Needs Fix	runtime/API error	GET /attendance/by-department?startDate=2026-05-05&endDate=2026-05-05 failed: column department.departmentname does not exist
